

## **Wireless**

---

The MIS Department provides many laptops that have a built-in wireless connection. This connection allows you to easily get high-speed internet access from many locations worldwide. Since every network is configured differently, with different procedures to connect, you will need to contact the owner of the wireless network for directions on how to connect. Most hotels which provide wireless access will have instructions in the room or at the front desk. Not all laptops have built in wireless.

### **Please Read Carefully the Following Security Alert Message !!!**

This laptop equipped with high-performance wireless networking capabilities, also known as Wi-Fi (Wireless Fidelity) which allows users to connect to the Internet in any Wi-Fi environment (public hotspot). Please read the following message which describes **possible security problems associated with wireless connections**.

The Wi-Fi works via radio wave transmissions that are broadcasted on public airways between your unit and the nearest hotspot, or, your own wireless router at home. Your use of **Wi-Fi service may allow others to gain unauthorized access of your unit to monitor or intercept data transmissions between your unit and public hotspots (including your own wireless router at home)**. As such, privacy cannot be guaranteed by Neal, Gerber & Eisenberg LLP, Internet service providers or hardware suppliers. Thus, it is your personal responsibility to obey all of the rules to prevent breach of security.

You can search for free wireless connections in the town you are visiting by searching on <http://free-hotspot.jiwire.com/search-hotspot-locations.htm>.

**READ THE WARNINGS ABOVE BEFORE USING ANY WIRELESS CONNECTION!**
